The "Ultimate" English Prompt for Claude Code

To make sure Claude Code doesn't get lazy and actually extracts everything from your **Nano Banana Pro** workflow, use this precise, high-pressure English prompt. This prompt is designed to force the AI to do the heavy lifting: analyzing your JSON, extracting your prompts, and writing a production-ready Python script.

Prompt Strategy

Role: Act as a Senior AI Automation Engineer specializing in Python and Modal.com.

Objective: Completely replace the multi-node sequence in Nano Banana Pro VisualStudioCode.json with a single, high-performance API endpoint in modal_app.py.

Mandatory Steps

1. Deconstruct the Workflow

- Open Nano Banana Pro VisualStudioCode.json.
- Locate every node that contains a **"System Prompt"** or **"Prompt Template"** (*Title Generator, Script Writer, Description Creator, Tag Generator*).
- **Hard Requirement:** Do not use placeholders. Copy the actual prompt strings from these nodes into Python variables inside modal_app.py.

2. Implement Agentic Orchestration

- Create a function named generate_nano_banana decorated with @modal.fastapi_endpoint.
- Inside this function, use the anthropic client to run a sequential **"Agentic Chain"**:
 - **Step A:** Generate the Video Title/Topic.
 - **Step B:** Use that Title to generate the Script/Structure.
 - **Step C:** Use the Script to generate SEO metadata (Tags/Description).
- Pass the output of each step into the next to ensure consistency.

3. Security & Environment

- Enforce **Bearer Token** authentication. Compare the Authorization header against the API_AUTH_TOKEN secret.
 - Use claude-3-5-sonnet-20241022 for all steps.
-

Deliverables

1. **Full Code:** A fully updated modal_app.py that handles the entire "Nano Banana" logic.
2. **Deployment:** The exact modal deploy command.
3. **Integration:** A single, ready-to-paste curl command for **n8n** that sends the topic and audience and receives the full content package (*Title, Script, SEO*) in one JSON object.

Constraint: Do not tell me to "add my logic here." Write the full, executable code now.

Нужно ли мне подготовить еще что-то для автоматизации вашего рабочего процесса?
